

## E3 ANDROMEDA

### A variable-pitch propeller for low powers

Ewol has been manufacturing variable-pitch propellers since 1997.

The manufacturer is offering a new model specially designed for engine power from 7 to 30 hp. Like its big brothers the E3 Orion and the E4 Pegasus, the Andromeda is made of stainless steel. The hub is fitted with gears that optimize forward and reverse performance, while minimizing drag under sail. The orientation of the blades is fully automatic: the micrometric pitch adjustment is carried out from the outside using the adjustment ring.

The Andromeda propeller has been designed to be easily installed, removed and adjusted in just a few minutes, even when your multihull is afloat.

## Le Flocon Suisse

### The smart multi-function tool!

Made in stainless steel, this object is obviously reminiscent of a snowflake... but above all it has 18 functions, including three screwdrivers, multiple hex keys, a bottle opener and much more. The Flocon Suisse (Swiss Snowflake in English) weighs very precisely 65.2 g (2.3 oz) and measures a little more than 2" (5.1 cm) in diameter. Its structure ensures a good grip for all your work. This tool can easily accompany you everywhere - as a key ring for example. Available in three colors: gold, silver or black.

**Suggested retail price: € 14.90**

## My First Victorinox

### A mini Swiss Army knife for children!

At stopovers, children always want to carve driftwood, make models, rafts, learn seamanship... However, entrusting them with a sharp and pointed tool is obviously not a good idea. But Swiss Army Knife manufacturer Victorinox has designed a four-function pocketknife with a rounded tip. Based around three animals (dolphin, rabbit, parrot), My First Victorinox comes with a practical strap and a coloring book, also

used as a guide so that each child can learn how to use his or her own pocketknife safely - under adult supervision, of course.

**Recommended retail price: € 43 inc. VAT**
